Polisocial Award

ObiGame

May the force be with you

Development and testing of an innovative approach to combat childhood obesity and promoting good life-styles behaviours through the use of a video-game that involves children and families. Through personalized "challenges", children are led in a process of learning and improving eating habits and physical activity.

ObiGame is designed in collaboration with healthcare professionals in order to integrate the "traditional" prevention and care pathways, allowing clinicians to monitor and personalize the intervention.
