Empty spaces

Projects for the reuse and reinterpretation of dwellings and vacant spaces in the public housing estate

The Municipality of Milan has required to reflect on the re-design of small dwellings and empty spaces located in the housing estate, property of the Municipality of Milan. In agreement with the City Council, it has been identified dwellings and empty spaces situated in different districts of the city of Milan which could be the objects of interior design elaborations and proposals. Students have developed interior design solutions at the scale of furniture and they have imagined new features and equipment for these small spaces with the aim of suggesting concrete ideas for the reuse of these spaces.
